

Visi-Trac for Healthcare

About RFID Global Solution

RFID Global Solution, Inc. is a leading provider of real-time clinical and business process visibility solutions for the Healthcare and Assisted Living markets. Visi-Trac™, an enterprise software application, provides Asset Tracking, Inventory Management and Staff Duress alerting, and can enable and integrate other applications such as Operating Room (OR) workflow, Patient Flow, Wander Management, Sterile Processing Lifecycle Management (SPD), and other clinical applications. The Visi-Trac platform can incorporate multiple data capture technologies including barcode, active and passive RFID and RTLS, and sensor technologies.

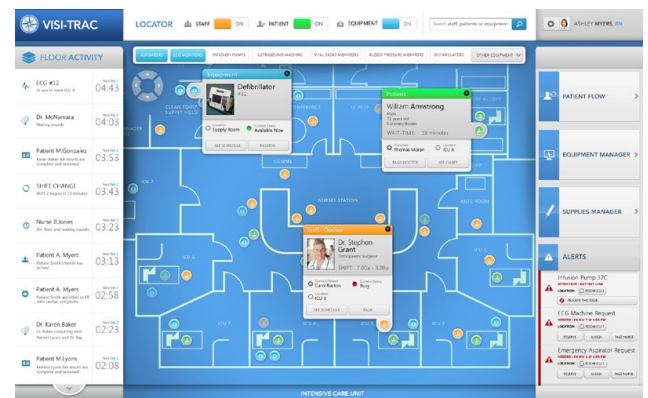

About Visi-Trac for Healthcare

Visi-Trac Healthcare is a process visibility solution designed to track assets, patients, providers and inventory, thus increasing provider productivity throughout a healthcare enterprise. Using the latest in automatic identification technologies, clinically critical assets such as reusable medical equipment (RME), rented equipment and other inventory can be tracked throughout their lifecycle. Visi-Trac combines location awareness, unique identification, and role-based access and control to track and locate assets and manage processes.

RTLS technologies pinpoint the location of physical assets, patients and providers, detecting irregularities in real-time and preventing never events. This results in time savings spent on asset or process administration with a subsequent reduction in operating costs.

Visi-Trac enables users to know where assets, patients and providers are, and if they are in the right place at the right time. Asset status is detected, validated and verified in an automated fashion. This provides real-time confirmation and verification of clinical processes.

Visi-Trac for Healthcare has been developed on enterprise projects with some of the world's leading healthcare institutions. Benefits include real-time clinical process visibility, reduced overall asset maintenance lifecycle costs, real-time inventory, and improved asset availability and security.
