**For Immediate Release**

**RFID Global Solution, Inc. Releases Visi-Trac™ for RFID and Sensor Deployments**

*Real-time visibility software built upon Microsoft BizTalk for RFID*

**Orlando, FL, and Eldersburg, MD, April 28, 2009** - RFID Global Solution, Inc., the leader in real-time visibility solutions for RFID and sensors, today announced the availability of Visi-Trac™, an enterprise platform which captures a wide range of RFID and sensor technologies including Ultra Wide Band, GPS, barcode, and temperature sensors. Visi-Trac allows customers to rapidly integrate and deploy scalable, real-time visibility solutions, and is the only real-time visibility software platform designed by true industry experts with extensive deployment experience.

Real-Time Visibility applications provide customers with the most accurate view of inventory and assets, helping to improve operational efficiency, reduce loss, improve productivity and enhance security. Visi-Trac is a scalable web services architecture built upon Microsoft BizTalk for RFID that provides integration to existing key business systems, aggregation of data capture technologies, flexible dashboards (server and client based) for key decision making, geo-fencing, alert notifications and real-time location mapping. The platform offers customers the ability to “dial-in” the granularity of real-time visibility that they need from capturing identity, location and condition across a broad range of data capture technologies.

“Our goal is to make the technology decision easier for customers,” said Joe White, COO of RFID Global Solution. “By allowing for the aggregation of RFID data from both active and passive technologies, customers can use a wide range of data capture technologies to solve their business needs. Visi-Trac improves operational efficiencies and enhances safety by ensuring awareness of the location and condition of mission critical assets.”

RFIS Global Solution has deployed Visi-Trac at five enterprise customers for real-time location solutions in aerospace, manufacturing, defense and commercial applications. The platform is currently delivering visibility into operations for security, safety, high value asset tracking, work-in-process visibility and inventory management.

Visi-Trac integrates RFID Global Solution’s RFID and sensor-based “SmartTrac” products seamlessly to offer customers with out of the box solutions. RFID Global Solution’s sensor-enabled products currently deployed and in use by Fortune 100 companies include SmartTable™

and SmartFreezer™. By utilizing Visi-Trac's development platform in combination with RFID Global Solution's products, implementation time in some applications has been reduced more than 75%.

"The Visi-Trac platform exemplifies our vision for how the Microsoft BizTalk Server 2009 platform will deliver customers with enterprise solutions to real-world problems," said Darrell Cavens, director of product management for BizTalk Server at Microsoft Corp. "We are excited to work with RFID Global Solution, which has built an important product on the platform capable of delivering customers real-time visibility across a suite of radio frequency identification data capture solutions."

**About RFID Global Solution, Inc.**

RFID Global Solution, Inc. is the leading provider of asset visibility solutions for defense, government and commercial clients. RFIDGS delivers enterprise asset visibility and the widest range of sensory data from active and passive RFID, GPS and Cellular technologies, in its award-winning, patented turnkey and custom products. RFIDGS provides asset tracking and visibility solutions to Aerospace & Defense, Government, Manufacturing, Transportation, and the Art & High Value Asset markets. RFIDGS' focus is on asset tracking, location awareness, security and supply chain visibility for high-value assets, tools, parts and supplies.
